## Getting Started w/STEM (S/E/M+T ) Integrated Play and Lesson Planning

Your Name: Colleen Cunningham

Class or Grade you teach: Prek

Name of School: St. Raymond

How many years have you been teaching? 25

Play or Lesson Plan Title: Exploring Nature with Tech Tools

City and State: St. Raymond School

District Name or #:

How long have you been using tech w/children? 4

<p><b>Play or Lesson Focus:</b> What question(s) do you want to help children investigate?</p> <p>Science and Technology</p>	<p><input type="checkbox"/> science</p> <p><input type="checkbox"/> Technology or Media Literacy (how to use tech or make tech)</p> <p><input type="checkbox"/> Engineering</p> <p><input type="checkbox"/> Math</p>
<p><b>Play or Lesson Objective</b></p> <ul style="list-style-type: none"> <li>○ Is this really one play or lesson plan?</li> <li>○ Or does it need to be divided into several different plans with their own objectives?</li> </ul>	<p>Students will explore natural materials collected from outside and describe what they observe.</p>
<p>Standards your plan meets (<a href="#">STE</a>, <a href="#">NSGG</a>, <a href="#">Advanced Ed STEM Certification</a>)</p> <p><b>NOT NECESSARY BUT FOR SOME PROGRAMS IT IS IMPORTANT TO LIST WHAT STANDARDS YOU ARE MEETING</b></p>	
<p>How will you help document children's wonder and curiosity?</p>	<p>Take pictures of students as they explore and write down what they observed.</p>

Link to this checklist: <http://bit.ly/TECSTEMPlan>

Refer to TEC Center's blog post for tech integrated play and lesson planning ideas: [bit.ly/TECQPlan](http://bit.ly/TECQPlan)

Padlet for STEM Lab resources and more ideas: <http://bit.ly/TECSTEM>

Technology as defined in the Early STEM Matters Report: <http://bit.ly/STEMatters>

<p><b>What questions will you ask to help them go deeper in their investigation?</b></p>	<p>I can ask questions to help students make observations - such as what does the item look like? What colors do you notice? What does this item look under the microscope? What shapes do you see?</p>
<p><b>What STEM vocabulary and terminology do you need to introduce?</b></p>	<p>Document camera-tool that helps us to see something very close up</p>
<p><b>What language/vocabulary might be helpful for children as they describe their processes for play/work/learning?</b>  <b>Will children need to be introduced to any new vocabulary or terms?</b>  <input type="checkbox"/> If so, when and how should you introduce these new words?</p>	
<p><b>Where and when will the learning and playing experience occur?</b>  <input type="checkbox"/> Inside or outside?  <input type="checkbox"/> Will children design the space with you?</p>	<p>Both inside and outside</p>
<p><b>How much facilitation do you want to have in your play and learning experience?</b>  <input type="checkbox"/> Does the facilitation need to be with an adult?  <input type="checkbox"/> Does the facilitation need be with a more experienced peer?  <input type="checkbox"/> Does the facilitation need to be with an older child?</p>	<p>The facilitator needs to be an adult. Preschool students need someone who can scaffold and support them in different ways based on their own skills.</p>
<p><b>How much of your time will be technology how-to focused and how much will be play or hands-on focused?</b>  <input type="checkbox"/> What materials do you need to prep or have nearby?  <input type="checkbox"/> What new vocabulary has to be introduced?  <input type="checkbox"/> What materials can the children create or make with tech tools, <a href="#">loose parts</a> or art materials?  <input type="checkbox"/> What type of sensory experience are you creating?</p>	<p>Most of the time with technology will be hands-on focused. Students will use t document camera. If students need support in using it, teacher will then offer how-to focused instruction.</p>

### What materials do I need?

#### Examples include:

- tech tools
    - Tablets i.e iPads, Fire, etc.
      - apps
    - Robot or tangible tech
    - laptop
    - desktop computer
      - Software
      - website
    - document camera
    - projector
    - microscope
    - flashlight/headlamp/solar lantern
    - Circuits
      - [Do You Have Flow? Idea book](#)
      - ProTips
        - [10 mm LEDs](#) are best for small hands
        - [3M Copper Tape](#) is worth the \$\$ it just works better as tested by Museum of Science & Industry
        - Don't forget [batteries](#)
  - robotics
  - other tangible tech
- tablet stand or tripod?
- green screen materials?
- writing and notetaking?
  - do students need to draw or take notes on paper?

### List or post pics of your materials here

- Desktop or laptop computer
- Document camera
- Natural items found outside (sticks, leaves, grass, etc)
- Pencil and paper (for teacher to take notes)

<input type="checkbox"/> Can the technology (hardware or software) be manipulated or adapted in any way to meet these needs?	
<p><b>How can you use cooperative grouping/roles to manage the activities?</b></p> <input type="checkbox"/> Do I need a helper if I am working with another group of children? <input type="checkbox"/> Do I need visual supports or a QR code that can take children to a tutorial?	<p>Students can be working in partners. Partners can be set up so that students who are more practiced in making observations can work with those who are not as observant. Teacher can help facilitate conversation between them.</p>
<p><b>Will there be a parent engagement or parent education piece?</b></p>	<p>Parents will be notified of the lesson using Seesaw!</p>
<p><b>How will I document my students work or how will my students?</b>  <b>How will we reflect on our work?</b></p>	<p>Pictures will be shared on Seesaw. Teacher will also write down some observations and share with the whole group. Teacher can also show some of the pictures that students take with the microscope and have them describe the photo to the class.</p>

**Describe your play or lesson plan activity so another teacher can understand what you did:**

**Additional Planning notes, description of play or lesson plan, pictures, links to helpful resources:**

1. Teacher and students engage in a discussion about the weather outside as it pertains to the time of year. Ex: "Now that it is Fall, what are some of the things that we are noticing outside?" Allow children to share what they see. End the discussion by telling students that we are going to take a closer look at some of the natural items that we might find outside. Make a list of what students will be collecting (depends on season)
2. Take students outside to collect natural items.
3. Bring materials back inside. In a large group, tell students that we are going to practice making observations. Review how to make a good observation: describing what we see, feel, smell. Noticing colors and shapes. Making connections. Teacher will also show the

Zoomy microscope and tell students that they will get a chance to use a new tool to help them make observations. The microscope is a tool that helps us to see small things close up.

4. In small groups, students sit with the materials and discuss what they see and the observations they have made. Teacher can facilitate discussion if necessary by asking questions. After students have 5-7 minutes to explore and make some observations, teacher can introduce the microscope if students seem interested. Teacher can briefly show students how to hold the microscope and show them how the image of what they are looking at shows up on the computer screen. Students can take turns exploring the materials with the microscope.
5. After all students have had a chance to explore the materials, collect students in a whole group and discuss their findings. Teacher can also share photos that students took with the microscope.
